

ULTIRACER

Indoor Real Cycling Device

CES 2020 Eureka Park
Booths : #53322
No.12 : RealDesignTech Co., Ltd.

Indoor Cycling using Roller and Treadmill is becoming active due to Environmental Pollution, Traffic Congestion, Safety Accidents and Rehabilitation. Recently, the front-wheel or front & rear wheel rotating type Devices that use roller, has been introduced.

But for users, the Device cannot provide full experience of Various Road Surface Conditions, ultimately does not have a complete function as cycling device.

Roller commonly used, is available for exercise with front wheels fixed, which means that it has a Game-Elements but it became difficult to experience a realistic cycling. Therefore, we found the needs to develop a new type of roller that can put on the user's own cycle and both front & rear wheels live.

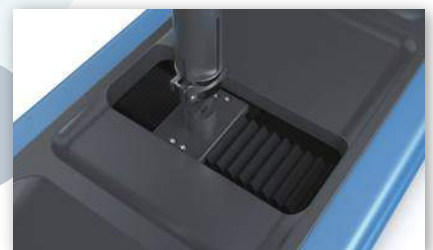

So it can experience the topography and road surface condition of the cycling course.

ULTIRACER is Designed to Enjoy Bike Riding with User's own Bikes.
By putting their own bike on the ULTIRACER, They will face a Whole New Experience.

Real Cycling Safety Device

Left & Right Safety Moving System

2-Axis Variable Roller System

RDT RealDesignTech Co., Ltd.

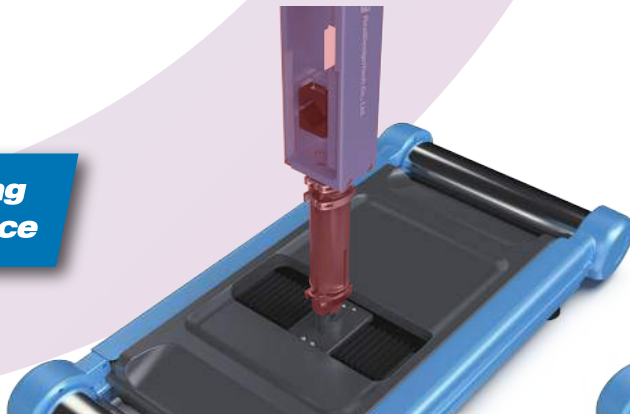

With ULTRACER, both wheels can spin, giving users the same experience as a Real Bike Ride. The most common indoor bicycle exercise equipment is a Health-Bike and a Fixed Roller.

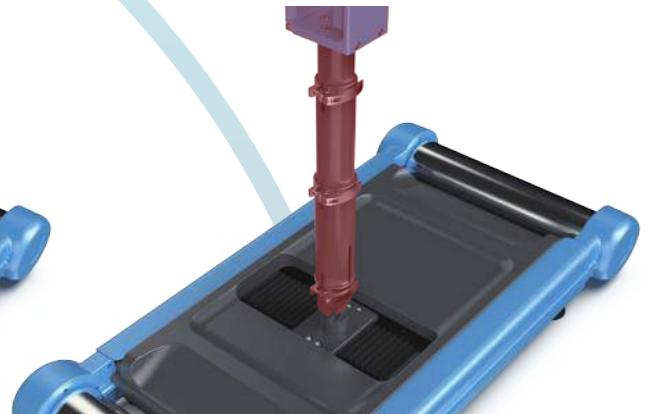

The Health Bike, which is a strength training machine, and a Fixed Roller that fixes the front wheel and mounts the rear wheel on a machine, make a Big Difference between an ULTRACER in realistic Cycling.

Main Features of ULTRACER

**Real Cycling
Safety Device**

Shortest Lengths of Clamp

Longest Lengths of Clamp

Real Cycling Software Display

**ULTRACER
Software & Games**
